Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: in combination with other limitations of the claims, the cited prior arts fail to teach a control circuit which controls, in event-driven fashion, the back-gate voltages of transistors forming logic elements of said circuit blocks, based on a finite state machine that stipulates in advance each of the state transitions of said plurality of circuit blocks; wherein said circuit blocks are always powered on, as recited in claim 1; the cited prior arts also fail to teach wherein said channels and ports control the back-gate voltages of transistors constituting logic elements of said circuit blocks, according to the operating states of said circuit blocks wherein said circuit blocks are always powered on, as recited in claims 5 and 17; the cited prior arts also fail to teach the back-gate voltages of transistors forming logic elements of a plurality of circuit blocks capable of transitions from an operating state to a standby state and from a standby state to an operating state are controlled based on a finite state machine which stipulates in advance each of the state transitions of said plurality of circuit blocks; wherein said circuit blocks are

always powered on, as recited in claim 14; and the cited prior arts also fail to teach a control circuit which controls, in event-driven fashion, the back-gate voltages of double gate TFTS forming logic elements of said circuit blocks, based on a finite state machine that stipulates in advance each of the state transitions of said plurality of circuit blocks, as recited in claim 20.

3. Claims 1-23 are now in condition for allowance.
